*Indonesia Health Profile Data in 2018 shows that there were 10 outbreaks of diarrhea spread in 8 provinces in Indonesia. School age is a vulnerable age for diseases such as diarrhea. Knowledge about PHBS must be enhanced, one of which is by promoting health. This study aims to develop media quartet as a learning medium for PHBS in fourth grade elementary school students. The research method used is research and development by adopting 5 of the 10 steps of the Borg and Gall model. Research subjects are media and material design expert. Data collection techniques used a questionnaire to assess the eligibility of PHBS quartet cards by expert. The result of the assessment of media and material expert obtained an average score of 88,5% which falls into the "Very Eligible" category. Further research needs to be carried out to the stage of limited trials, implementation, and evaluation.*
