ABSTRACT

Teeth for a child are very important in growing the child's own growth. Especially at the age of a first-grade elementary school student at this age permanent teeth start to erupt and it is important to be aware that no early damage occurs. This research aims to find out the picture of first-grade parents' knowledge of stem growth in elementary school children. This research uses a descriptive research method. The population in this study is the entire first-grade parents of 21 SDN Batang. In this research using total sampling. The research instruments used in this research use a questionnaire. Data will be analyzed and presented in the form of a frequency distribution that describes the situation of the parents' knowledge of the S.D.N. Stands about dental growth. Research shows that as much as 47.6% of parents don't know about the period of tooth growth then as much as 66.7% of parents don't know about the factors that affect tooth eruptions. The level of education response that knowledge of dental growth category is less is the primary group that is 33.3% and the respondent's job is to know about the growth of less-category teeth is the work of a housewife, which is 47,6%.

Key word: Knowledge, parents, tooth growth.
