Kehamilan, persalinan, nifas merupakan proses alami yang dialami seorang wanita. Pada masa kehamilan masalah utama yang sering dialami yaitu sakit pinggang. Tujuan tugas akhir ini adalah untuk memberikan asuhan yang komprehensif pada pasien mulai dari kehamilan, persalinan, nifas dan bayi baru lahir.

Laporan tugas akhir merupakan hasil studi kasus asuhan komprehensif. lokasi pengambilan kasus dilaksanakan di PMB Bidan E Desa Peteuycondong Kecamatan Cibeber Kabupaten Cianjur. Subjek studi kasus ini yaitu Ny. S usia kehamilan 35 minggu sampai dengan persalinan, nifas dan bayi baru lahir. Waktu pelaksanaan asuhan komprehensif yaitu bulan Januari – Maret 2020.

Selama asuhan kebidanan komprehensif ditemukan masalah ketidaknyamaan pada trimester III yaitu sakit pinggang. Asuhan yang diberikan yaitu senam hamil dan KIE tentang bodi mekanik, masalah tersebut dapat teratasi. Selama asuhan persalinan, persalinan berlangsung normal, bayi lahir normal tidak ada komplikasi, masa nifas juga berlangsung dengan normal ibu memberi ASI pada bayinya isapan bayi kuat. Asuhan pada bayi tidak ditemukan masalah. Pada hari ke 42 nifas ibu belum menggunakan KB dengan alasan suaminya masih di luar negri tetapi ibu berencana menggunakan KB suntik 3 bulan. Selama masa pandemi COVID-19 ini asuhan pada ibu dan bayi dilakukan secara online.

Asuhan kehamilan, persalinan, nifas, bayi baru lahir dan keluarga berencana telah dilakukan. masalah yang ditemukan pada masa kehamilan sudah dapat diatasi. Diharapkan bidan dapat meningkatkan kualitas dan kuantitas dalam memberikan setiap asuhan komprehensif.

"COMPREHENSIVE MIDWIFERY CARE IN MRS. S AT THE MIDWIFE'S INDEPENDENT PRACTICE MIDWIFE E PETEUY CONDONG VILLAGE CIBEGER SUB-DISTRICT CIANJUR REGENCY "

ABSTRACT

XVI + V CHAPTER + 131 pages + 4 tables + 4 attachments

Pregnancy, childbirth, childbirth are natural processes experienced by a woman. During pregnancy the main problem that is often experienced is low back pain. The purpose of this thesis is to provide comprehensive care for patients ranging from pregnancy, childbirth, childbirth and newborns.

The Final Assignment report is the result of a Comprehensive Care case study. The location of the case was carried out at PMB Midwife E Peteuy condong Village, Cibeber District, Cianjur Regency. The subject of this case study is Mrs. S is 35 weeks' gestation to labor, chilbed and newborn baby. The time for implementing comprehensive care is January - March 2020.

During comprehensive midwifery care were found discomfort problems in the third trimester that is lumbago. Pregnancy gymnastics and IEC about the mechanical body are care provided, the problem can be resolved. During childbirth care, the labor goes normally, babies born normally not have complications, the puerperium also proceeded normally, strong baby sucking when the mother giving ASI. Care of the baby was not found a problem. On the 42nd day after childbirth, the mother did not use family planning because her husband was still abroad, but she planned to use 3 months an injection. During the COVID-19 pandemic, mothers and babies were done online.

As long as comprehensive midwifery care goes smoothly. However, when pregnancy care is found discomfort problem in the third trimester that is lumbago, care provided is pregnancy exercises and IEC about the mechanical body, the problem can be resolved. It is hoped that midwife can improve quality and quantity in providing each comprehensive care.
