**Asuhan Kebidanan Persalinan Pada NY.S Usia 31 Tahun G3P2A Di Puskesmas
Caringin Kabupaten Bogor**

VI BAB, 139 Halaman, 8 Lampiran, 9 gambar, 1 tabel

ABSTRAK

Prevalensi persalinan normal mencapai 90% dibandingkan dengan persalinan partologis. Persalinan harus ditolong oleh tenaga kesehatan yang kompeten dan di fasilitas kesehatan untuk menghindari komplikasi yang tidak diharapkan. Pada tahun 2022 di Provinsi Jawa Barat tercatat sebanyak 93,42% ibu melahirkan di fasilitas kesehatan. Tujuan penulisan laporan ini yaitu untuk memberikan asuhan kebidanan persalinan yang sesuai dengan standar serta memperhatikan aspek 5 benang merah dalam persalinan

Metode yang digunakan dalam pengkajian dan penulisan laporan ini ialah laporan kasus. Bentuk pendokumentasiannya menggunakan SOAP (Subjektif, Objektif, Analisa dan Penatalaksanaan). Teknik pengumpulan data didapatkan melalui wawancara, observasi, pemeriksaan fisik, studi dokumentasi dan studi literatur.

Hasil pengkajian data subjektif yaitu Ny.S usia 31 tahun mengeluh keluar lendir darah dan mulas sejak pukul 02.00 WIB. HPHT 04-07-2023, ini kehamilan ketiga, belum pernah keguguran, ibu merasa mulasnya semakin sering dan kuat. Data objektif TTV normal, TFU 38 cm, fundus teraba bokong, punggung kanan, ekstremitas kiri, presentasi kepala, perlimaan 2/5, DJJ 136x/menit, teratur. His 4x10'45". Vulva vagina tidak ada kelainan, tidak ada varices, portio tipis lunak, pembukaan 7 cm, selaput ketuban utuh, penurunan kepala hodge 3. Analisa yang ditegakkan adalah Ny.S usia 31 tahun G3P2A0 usia kehamilan 39 minggu, inpartu kala 1 fase aktif, janin tunggal hidup, presentasi kepala, kondisi ibu dan janin baik. Asuhan yang dilakukan yaitu asuhan persalinan normal kala I,II,III,IV dengan aspek 5 benang merah dan antisipasi gawat darurat, serta konseling kebutuhan dasar bayi dan ibu nifas.

Kesimpulan asuhan diberikan pada tanggal 06 April 2024 dengan hasil asuhan persalinan tidak ada komplikasi persalinan pada ibu maupun bayi, serta dalam keadaan sehat. Saran untuk ibu agar dapat melakukan deteksi dini kondisi ibu dan bayi, melakukan pola hidup sehat dan memantau tumbuh kembang bayi.

Midwifery Care for NY.S Aged 31 Years G3P2A at Caringin Community Health Center, Bogor Regency

VI Chapter, 139 pages, 8 attachments, 9 images, 1 tables

ABSTRACT

The prevalence of normal delivery reaches 90% compared to pathological delivery. Childbirth must be assisted by competent health personnel and in a health facility to avoid unexpected complications. In 2022 in West Java Province, 93.42% of mothers will give birth in health facilities. The purpose of writing this report is to provide midwifery care for childbirth that is by standards and pays attention to aspects of the 5 common threads in childbirth

The method used in studying and writing this report is a case report. The form of the documentation uses SOAP (Subjective, Objective, Analysis and Management). Data collection techniques were obtained through interviews, observation, physical examination, documentation study and literature study.

The results of the subjective data assessment were that Mrs. S, 31 years old, complained of bloody mucus and heartburn since 02.00 WIB. HPHT 07-04-2023, this is the third pregnancy, never had a miscarriage, and the mother feels that her heartburn is becoming more frequent and stronger. Objective data TTV normal, TFU 38 cm, fundus palpable buttocks, right back, left extremities, head presentation, fifths 2/5, FHR 136x/minute, regular. His 4x10'45". There are no abnormalities in the vaginal vulva, no varices, thin soft portion, 7 cm dilated, intact amniotic membranes, lowered hodge head 3. The analysis carried out is Mrs. live singleton, cephalic presentation, and good condition of the mother and fetus. The care provided is normal delivery care for stages I, II, III, IV with aspects of the 5 threads and anticipation of emergencies, as well as counseling on the basic needs of babies and postpartum mothers.

The conclusion of care was given on April 6 2024 with the results of birth care, there were no birth complications for the mother or baby, and they were in good health. Suggestions for mothers to detect the condition of the mother and baby early, adopt a healthy lifestyle and monitor the baby's growth and development.
