***RELATIONSHIP OF FAMILY HEALTH TASKS WITH COVID-19  
PREVENTION BEHAVIOR (LITERATURE REVIEW)***

***ABSTRACT***

*XI, 51 pages, 5 chapters, 2 charts, 3 tables, 7 appendices*

*Coronavirus Disease 2019 is an infectious disease caused by Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2). This virus is a new type of coronavirus that has never been previously identified in humans. The Covid-19 outbreak that occurred in China has spread to various countries, including Indonesia. Due to the widespread spread of Covid-19, it requires proper prevention efforts. Families play an important role in the sustainability of the quality of health for their family members. Therefore, the family has a role and duty to take care of each other and create a balance of health status by carrying out family health duties in it. The purpose of this study was to determine the relationship between family health tasks and Covid-19 prevention behavior. The method used in this study is Literature Review, with secondary data collection techniques obtained as many as 4 journals. The results showed that there was a relationship between family health tasks and Covid-19 prevention behavior. Journal 1 had a relationship (p value 0.000), journal 2 had a relationship (p value 0.003), journal 3 had a relationship (p value 0.001), journal 4 families had an important role in preventing the spread of the virus. Covid-19. Conclusion: there is a relationship between family health tasks and Covid-19 prevention behavior. Recommendation: Community health nurses are expected to be able to provide information regarding the prevention of COVID-19 to families so that families will be able to implement good Covid-19 prevention behavior.*
