GAMBARAN PENANGANAN LIMBAH MEDIS PADAT DI PUSKESMAS PASIRKALIKI KOTA BANDUNG DI MASA PANDEMI COVID-19 TAHUN 2021

xv+54 Halaman+19 Tabel+ 4 Gambar+11 Lampiran

Puskesmas Pasirkaliki Kota Bandung merupakan Puskesmas yang mencakup 5 Kelurahan di Kecamatan Cicendo dan memegang peranan penting dalam upaya pelayanan masyarakat di tengah pandemi Covid-19 Kota Bandung. Berbagai pelayanan kesehatan di puskesmas menghasilkan limbah medis yang dapat membahayakan apabila tidak ditangani sesuai dengan PerMen LHK No.56 Tahun 2015.

Jenis penelitian bersifat deskriptif, dengan responden petugas kebersihan dan petugas medis dan 7 ruang puskesmas sebagai sumber limbah medis dan tempat penyimpanan sementara. Pengambilan data dengan menggunakan lembar observasi dan lembar kuesioner. Hasil penelitian menunjukkan puskesmas tidak memenuhi syarat dalam penanganan limbah medis padat berdasarkan observasi tahap pengurangan dan tahap pemilahan 100% memenuhi syarat, tahap pengangkutan internal 20% memenuhi syarat dan tahap penyimpanan sementara 80% memenuhi syarat. Pada aspek pengetahuan petugas didapatkan 90% sangat baik dan 10% baik dan pada aspek sikap petugas didapatkan 100% baik. Disarankan adanya sarana alat angkut tertutup beroda menuju tempat penyimpanan sementara, adanya jalur khusus pengangkutan internal limbah, adanya ruang khusus dalam penyimpanan limbah medis padat dengan melengkapi penutup agar hewan lain tidak mudah masuk serta terlindung dari sinar matahari dan faktor lainnya.

OVERVIEW OF SOLID MEDICAL WASTE MANAGEMENT IN PASIRKALIKI PUSKESMAS, BANDUNG CITY DURING THE COVID-19 PANDEMIC IN 2021

xv+54 Pages+19 Tables+ 4 Images+11 Attachments

The Pasirkaliki Health Center in Bandung City is a health center that covers 5 sub-districts in Cicendo District and plays an important role in community service efforts in the midst of the Covid-19 pandemic in Bandung City. Various health services at the puskesmas produce medical waste that can be dangerous if not handled in accordance with the Minister of Environment and Forestry Regulation No. 56 of 2015.

This type of research is descriptive, with respondents being janitors and medical officers and 7 puskesmas rooms as sources of medical waste and temporary storage. Collecting data using observation sheets and questionnaire sheets. The results showed that the puskesmas did not meet the requirements for handling solid medical waste based on the observations of the reduction and sorting stages 100% qualified, the internal transportation stage 20% met the requirements and the temporary storage stage 80% met the requirements. In the aspect of officer knowledge, 90% is very good and 10% is good, and in the attitude aspect of the officer is 100% good. It is recommended that there be a closed means of transportation on wheels to the temporary storage area, a special route for internal waste transportation, a special room for storing solid medical waste by completing a cover so that other animals do not easily enter and are protected from sunlight and other factors.
