Midwifery care for Mrs. A with Abortion Insipiens and mild anemia at
RSUSalak Bogor Library, VI Chapter, 53 Pages,5 Attachments,

ABSTRACT

Anemia is a condition in which the number and size of red blood cells or the concentration of hemoglobin is below the normal limit, which can interfere with the capacity of the blood to carry oxygen around the body. Anemia can cause indirect effects on the mother and fetus, including abortion. Abortion is the end of a pregnancy before the age of 20 weeks. Based on data obtained at RSU Salak Bogor from September 2021 - February 2022 there were 65 cases of antepartum bleeding, 48.9% of antepartum bleeding were caused by abortion. Abortion can cause shock, bleeding and infection.

The method used in the preparation of the Final Project Report is a case report, using a midwifery management approach in the form of SOAP documentation. Data collection techniques include interviews, physical examinations and documentation studies.

Subjective data obtained, the mother complained of heartburn since 14.30 and the discharge of blood mucus and water from the birth canal since 16.00 normal vital signs. There is tenderness in the lower abdomen, there is vaginal bleeding of 10cc, there is no tissue coming out, there is already an opening of 3cm and the laboratory results of the mother's hb are 9.8 g/dl. The analysis obtained was Mrs. A abortion insipiens and mild anemia. The treatments are collaboration with doctors, bed rest, RL therapy drug therapy with 2 ampoules of syntocinon to remove tissue, neurobion 3x1/oral 200mg and providing emotional support.

The conclusion of this case is that after being treated for incipient abortion in accordance with the SOP of the Salak Hospital, the tissue can come out spontaneously and a curettage will be carried out on March 4, 2022 because after a follow-up examination there is residual tissue. Suggestions for practice areas are expected to be able to maintain services in accordance with SOPs, especially in midwifery services with abortion. Suggestions for the profession can improve the quality of care in accordance with the theory that continues to develop but still based on its authority. For clients to know how to establish a healthy pregnancy in the future and to plan contraceptive injection methods.
