**ASUHAN KEBIDANAN KOMPREHENSIF PADA NY. E DENGAN
PARTUS PRESIPITATUS DI WILAYAH KERJA PUSKESMAS CIBOGO
KABUPATEN SUBANG TAHUN 2022**

ABSTRAK

xiv + V BAB + 17 HALAMAN + 5 LAMPIRAN

Peningkatan derajat kesehatan masyarakat dapat dicapai melalui peningkatan pelayanan kesehatan khususnya di bidang kebidanan. Selama proses persalinan dapat terjadi komplikasi akibat kelainan his yaitu partus presipitatus. Komplikasi tersebut dapat diminimalisir dengan memberikan asuhan yang tepat dan benar dengan penerapan *Continuity of care* dalam kebidanan yang berkesinambungan dan menyeluruh sehingga berpotensi meningkatkan kualitas asuhan bagi semua wanita. Laporan tugas akhir bertujuan untuk menerapkan asuhan kebidanan komprehensif.

Laporan tugas akhir berupa studi kasus asuhan kebidanan komprehensif. Pemberian asuhan dilakukan di Wilayah Kerja PKM Cibogo Kabupaten Subang pada April-Mei 2022 dengan subjek Ny. E G₃P₁A₁ sejak usia kehamilan 39 minggu, persalinan, BBL, hingga nifas 6 minggu melalui metode pengumpulan data primer dan sekunder.

Selama asuhan komprehensif tidak ditemukan masalah pada kehamilan. Namun pada persalinan terjadi partus presipitatus, selama nifas terdapat bengkak payudara dan puting lecet, serta masalah pemberian ASI pada BBL. Masalah tersebut dapat teratasi dengan pemberian konseling dan asuhan sesuai dengan kebutuhan klien. Diharapkan bidan dapat melakukan asuhan komprehensif secara berkualitas dengan mempertahankan asuhan fisiologis yang sesuai dengan standar dan kewenangan bidan.

Kata Kunci : *Continuity Of Care*, Asuhan kebidanan komprehensif, partus presipitatus

ABSTRACT

xiv + V CHAPTER + 175 PAGES + 5 APPENDICES

Increasing the degree of public health can be achieved by improving health services, especially in the field of midwifery. Complications can occur during the labor process due to contraction abnormality, such as precipitous labor. These complications can be minimized by providing appropriate and correct care with the continuous and comprehensive application of Continuity of care in midwifery so can improve the quality of care for all women. This final project is a case study to implement comprehensive midwifery care.

The final project report is a case study of comprehensive midwifery care. The provision of care carried out in the Cibogo Health Center Working Area, Subang Regency on April to May 2022 the subject was a G3P1A1 pregnant women, the care started from 39 weeks until 6 weeks postpartum. The data collected with primary and secondary method.

During comprehensive care, there were no problems in pregnancy. However, during delivery, there was precipitous parturition, during postpartum there was swelling of the breasts and nipple blisters, as well as problems with breastfeeding in infants. This problem has been solved by providing counseling and care according to the client's needs. It is expected that midwives can provide comprehensive quality care by maintaining physiological care that is in accordance with the standards and authority of the midwife.
