**ASUHAN KEBIDANAN KOMPREHENSIF PADA NY. S DI WILAYAH
KERJA PUSKESMAS CIRANJANG KABUPATEN CIANJUR
PERIODE APRIL S.D MEI 2022**

ABSTRAK

xii + V BAB + 141 halaman + 5 tabel + 4 lampiran

Kesehatan ibu dan anak merupakan salah satu prioritas dalam pelayanan kesehatan di Indonesia. Ibu dan anak adalah kelompok yang rentan terhadap kesehatannya, sehingga perlu mendapatkan asuhan kebidanan komprehensif. Bidan selaku tenaga kesehatan dapat melakukan upaya peningkatan pelayanan tersebut, agar dapat mendeteksi dini apabila terjadi komplikasi. Tujuan dari Laporan Tugas Akhir yaitu memberikan asuhan kebidanan komprehensif kepada Ny. S di wilayah kerja Puskesmas Ciranjang Kabupaten Cianjur periode April s.d Mei 2022.

Laporan Tugas Akhir ini menggunakan metode studi kasus. Asuhan ini berlokasi di PMB bidan E. Berdasarkan studi kasus ini, klien diberikan asuhan mulai dari kehamilan, persalinan, nifas, dan bayi baru lahir, dengan menggunakan pendekatan manajemen asuhan kebidanan. Teknik pengumpulan data terdiri dari data primer dan data sekunder.

Berdasarkan fakta dilapangan, proses persalinan berlangsung normal, masa nifas berjalan normal, dan bayi dalam kondisi normal. Tetapi, pada saat asuhan kehamilan terdapat masalah fisiologis, yaitu nyeri punggung, dan keluhan tersebut dapat teratasi. Diharapkan asuhan kebidanan komprehensif dapat dilakukan sesuai dengan teori sehingga tidak terjadi kesenjangan dalam melakukan asuhan, dan dapat meningkatkan pelayanan kebidanan pada klien, keluarga dan masyarakat.

Kata Kunci: Asuhan kebidanan komprehensif, kehamilan, persalinan, nifas, bayi baru lahir.

**COMPREHENSIVE MIDWIFE CARE OF NY. S IN CIRANJANG HEALTH
CENTER WORKING AREA CIANJUR REGENCY
PERIOD APRIL TO MAY 2022**

ABSTRACT

xiii + V chapter + 141 pages + 5 tables + 4 attachments

Mothers and children health are one of the priorities in health services in Indonesia. They are including as a vulnerable group therefor; they are in need to get a comprehensive midwifery care. Midwives as health workers can make efforts to improve these services, in order to detect early if complications occur. The purpose of the Final Project Report is to provide comprehensive midwifery care to Mrs. S in the working area of the Ciranjang Public Health Center, Cianjur Regency from April to May 2022.

This final report uses the case study method. This care is located at PMB midwife E. The subject of this study based on this case study that was taken 38 weeks, pregnant women, which has been given midwifery care during the pregnancy until the postpartum period. Data collection techniques consist of primary data and secondary data.

During the midwifery care, the delivery and postpartum were found to be normal. Hence, we found there was physiological problems such as back pain, and other complaints which has been solved. A comprehensive midwifery care are expected to be provide according with the theory to improve midwifery services to the clients, families and communities.
